

Patiola

Terrace Cover

The Patiola allows you to ignore the uncertainty of the British weather. It can help you create extra outdoor space that can be utilized at any time of the year or everyday.

In summer it provides a shaded alfresco ambience, however when fully enclosed in the autumn and winter months, you can enjoy a great room outdoors. With the versatility to open or close at the touch of a button it is ideal for patio areas, terraces restaurant extensions and has been embraced by many business sectors.

- Available to a maximum size of 5 meters in width and a 6 meter projection.
- Modules can be linked utilising the guttering system, meaning that there is no restriction to the area that can be covered.
- Triangle apex blinds and drop down side blinds, helps create the room-outdoors feel.
- Orchestra Max fabric is designed with self cleaning technology especially for use in retractable awnings and with an additional treatment to increase its waterproofing qualities and guarding against ultraviolet rays.
- Combination of integral tubular motor and twin spring system ensures perfectly tensioned fabric when extending and retracting the cover.

Operation

Electric operation is standard with push button control, options to upgrade to remote control operation and CMTI fabric tensioning system.

Specification

- Awning with wall mounted cassette and ground fixed side channels specifically designed as a self supporting terrace cover.
- Each unit capable of a 6m projection and 5m width. Multiple units can be joined together in width, and the use of a goal post can create a free standing back to back system covering up to 12m extension.
- Fabric tested to a high standard against fading, mildew and rot resistance. 31 fabric references to chose from.
- In order to provide adequate water drainage it is recommended that the Patiola is mounted with a minimum angle of 10 degrees.
- Robust aluminium frame work available in 3 standard colours, white (RAL 9010), brown (RAL 8019) or ivory (RAL 1015).

Options

- Overhead lighting bar neatly positioned in the roof section to create a unique night time atmosphere.
- Guttering covering the gaps between the fabric and frame work and used when two systems are installed adjacent to one another.
- Fabric to ground level to provide a more enclosed option.
- Integralspeaker bars.
- Triangular apex blinds and drop down side blinds for a fully enclosed feel
- Somfy remote control operation.
